Who We Are

Since our founding in 2003, we've earned a reputation for industry-leading hardware asset management. What started as a simple scanning solution has grown into a suite of tools that makes HAM easier and more cost effective – while delivering better ROI than other products.

We believe that asset management is about more than just keeping track of your stuff. It's about empowering you to pull maximum value from every asset connected to your organization.

This is the vision pushing our company forward. And this is what we deliver to every customer, every day.

OUR VISION

Empower every customer with
simplified asset management solutions.

OUR MISSION

Provide enterprise-level tools and expertise
to make asset management simple, flexible,
reliable, and cost-effective on any
platform.

Who We Serve

Every industry has unique assets to track with distinct reasons for tracking them. Whether you're a government trying to enhance compliance or a manufacturer seeking to reduce machine downtime, our tailored approach to asset tracking allows us to address the nuanced challenges of any industry.

Challenges in Asset Management

Many enterprises face issues such as ghost assets, idle inventory, and inefficiencies in asset deployment and disposition. These challenges lead to financial losses and decreased productivity.

AssetTrack Solution

AMI AssetTrack is an all-in-one solution that addresses these pain points by automating the asset lifecycle, from acquisition to disposal. It provides real-time tracking, asset certification, and advanced auditing features to optimize resource utilization and reduce compliance risks.

Key Features

- **Full Asset Lifecycle Automation:** From delivery, to tracking, to auditing, to retirement – keep your hardware & IT assets tracked and under control with automated tracking, and configure forms for every lifecycle task.
- **RFID & Barcode Tracking:** Reduce up to 90% of your scan time by using anything from USB scanners to RFID to AssetTrack's iOS and Android compatible mobile app.
- **Advanced Auditing:** AssetTrack can create advanced audits specifically geared to your needs and track their performance over time. Define what you want to audit, and how frequently, across the whole business, and save time by adding multiple users to the audit.
- **Self Certification Audits:** AssetTrack allows remote users to certify equipment and incorporate it into its broader asset repository. By keeping track of remote devices, asset managers can also reclaim, redeploy and retire these assets, deriving their full value and keeping their asset ecosystem secure.
- **Analytics:** Optimize your asset management with built-in metrics to help reduce risks, cut costs, and track performance while ensuring vendor and employee accountability.
- **Custom Solutions:** Industry-specific customizations, including sustainability tracking and compliance reporting, make AssetTrack flexible for diverse industries like healthcare, government, manufacturing and finance.

The Benefits

REDUCED COSTS

Elimination of ghost assets and more efficient asset utilization translates to significant cost savings.

IMPROVED COMPLIANCE

Automated audits and detailed tracking ensure adherence to regulatory requirements.

INCREASED ROI

Optimized asset deployment and improved lifecycle management drive higher ROI.
